

Getting Yourself Organized with Org-Mode

E06S02 - Advanced Exporting

Jonas Avrin

September 28, 2018

Customize new backends

- Customize group "org-export" and "org-export-backends"
 - Enable "beamer" for L^AT_EX beamer support¹
 - Enable "odt" for export to OpenDocument type

¹This file was created with beamer

Add some options for beamer export

- **+AUTHOR:** The author of the document
- **+TITLE:** To define a title
- **+SUBTITLE:** Define a subtitle
- **+DESCRIPTION:** Produces metadata, no output by default
- **+BEAMER_THEME:** Select a beamer theme
 - Google for "latex beamer themes" to see what's available
- **+BEAMER_FONT_THEME:** Select a font for the beamer slides

More useful options

Additional **#+OPTIONS:** (with "nil" or "t")

Option	Description
toc	Enable Table of Contents
^	Enable sub/superscripting (used it here for BEAMER_THEME)
tags	Export tags
f	Export footnotes (used on slide 2)
\n	Toggle line break preservation

More options can be found in manual.

Things to keep in mind
